

## TRACKING PROGRAM

*Pre-requisites and evaluation required prior to training.*

**All dogs must be evaluated for these tracking courses and have a minimum basic knowledge of obedience training before starting any of these courses**

### Basic - 14 day live in program

This basic tracking course teaches the dog to detect and follow a ground or air borne scent of a human, they must have a basic knowledge of obedience. The track starts off as a basic short straight line and advances into a longer track with several turns. They are taught to cast and stay true to the initial track they were following. After training is complete the handler will be taught how to maintain this training technique with private one on one session.

### Advanced - 48 day live in program

This course will teach your dog to track basic and advance tracks over difficult ground such as hard, rocky and mixed scented surfaces etc. The tracks will become longer older and back tracking techniques will be introduced. They learn to use air borne scent and discriminate between fouled tracks and the original scented track. Several private lessons are required with handlers for this advanced tracking program.
